Summary

Software Engineering Graduate with a strong foundation in Java, Python, and full-stack web development. Passionate about designing and implementing custom frontend and backend services, with proven expertise in building Generative AI and NLP-driven applications. Skilled at delivering clean, modular code throughout the software development lifecycle (SDLC). Motivated to partner with cross-functional engineering, business, and product teams to translate requirements into highly scalable, secure, and user-centric web applications.

Skills

Languages: Java, Python, FastAPI, SQL, JavaScript, React, Data Structures & Algorithms, Object Oriented Programming

Generative AI & Agentic Tech: Prompt Engineering, Semantic Search, Vertex AI, Salesforce Agentforce

Tools & Infrastructure: Git, GitHub, Docker, Vercel, Railway, Salesforce CRM, Einstein Trust Layer, Claude Code, Cursor

Experience

Edunet Foundation | AI & ML Intern

Jun 2025 – Jul 2025

- Engineered an **Smart Finance Dashboard** model achieving 90% accuracy utilizing Python, scikit-learn, and pandas; managed the end-to-end data preprocessing and feature engineering lifecycle.
- Developed clean data pipelines ensuring robust input validation for model ingestion, aligning with MLOps best practices.
- Collaborated with cross-functional peers and technical project leads to perform code reviews, evaluate system metrics, and ensure compliance with internal scalability and security standards.

Projects

AI ATS Resume Analyzer | *React.js, FastAPI, Python, Docker*

- Architected an automated AI resume analyzer, achieving sub-3 second end-to-end processing latency, by decoupling a React frontend from a containerized FastAPI backend powered by Groq LLaMA-3.3-70b.
- Engineered a robust ATS scoring engine, achieving 95% keyword extraction reliability across complex multi-column PDFs, by developing a custom Python parser utilizing pdfplumber, synonym mapping, and string similarity algorithms.
- Increased user registration conversions by 25%, by designing a frictionless guest trial flow that seamlessly migrates anonymous session history into permanent Supabase profiles using secure JWT authentication.

Autonomous Salesforce Service Agent | *Salesforce, Agentforce, Prompt Builder, Einstein Trust Layer*

- Designed and implemented an autonomous AI service agent utilizing Salesforce Agentforce Builder to streamline automated customer recommendation and booking workflows.
- Engineered secure, context-aware prompt templates using Prompt Builder, leveraging the Einstein Trust Layer to guarantee 100% data privacy and mask sensitive user information during LLM orchestration.
- Optimized sales and support automation systems by grounding agent logic in structured CRM datasets, improving resolution response accuracy for simulated operational workflows.

Wellness Wings: Care Management System | *Flutter, Node.js, PostgreSQL*

- Delivered an eldercare platform backend, measured by 100% successful Render cloud deployments, by engineering Node.js and PostgreSQL REST APIs to support concurrent elderly, volunteer, and guardian user data routing.
- Accelerated the volunteer onboarding process, evidenced by an 80% reduction in manual verification times, by developing dedicated admin-controlled PostgreSQL approval workflows and direct JSON state data parsing functions.
- Improved guardian monitoring capabilities, measured by a 95% increase in geographic location accuracy, by integrating OpenStreetMap tile rendering and live volunteer GPS tracking endpoints within the Flutter application.

Education

Rajalakshmi Engineering College (Autonomous)

B.Tech in Computer Science and Business Systems

Chennai, India

Nov 2022 – Apr 2026

Certifications & Awards

Oracle Certified: Java Foundations (Dec 2025)

Salesforce Trailhead: Agentforce Service Agent & Prompt Builder Specialist (May 2026)

Gen AI Academy: Vertex AI, Streamlit, and Multimodal RAG (Jul 2025)

Winner: 1st Place in iQuest'25 Department-Level Project Competition (Feb 2025)
