SUMMARY

Computer Science graduate (2026) with hands-on experience building and testing full-stack applications in Java, Python, React, and FastAPI. I have written, unit-tested, and deployed backend services end-to-end, including a machine learning prediction API and an AI-based resume analysis tool, following standard software development lifecycle practices. Looking for an entry-level apprenticeship where I can apply what I know, learn from experienced engineers, and grow into a strong software developer.

SKILLS

Programming Languages: Java, Python, SQL, Object Oriented Programming

Frameworks & Tools: Git, GitHub, FastAPI, React, Unit Testing, Debugging, Agile, Docker, Google Cloud Platform (OAuth 2.0, Vertex AI), Vercel

Practices: Software Development Life Cycle, Code Review, Prompt Engineering, Semantic Search

EXPERIENCE

Edunet Foundation

Jun 2025 – Jul 2025

AI & ML Intern

- Achieved 86.7% predictive accuracy on 48,842 records by engineering Smart Income Predictor, an ensemble ML classifier using Random Forest and Gradient Boosting.
- Reduced data preprocessing time by 40% by building and testing automated Python pipelines (Pandas) for categorical encoding and missing value imputation across structured census datasets.
- Delivered real-time risk predictions under 100ms by deploying the trained model behind a Flask REST API integrated with a React dashboard, following team coding standards throughout.

PROJECTS

AI ATS Resume Analyzer | *React.js, FastAPI, Python, Docker*

[GitHub](#)

- Reduced resume-scan latency to under 300ms at \$0 API cost by writing a local Python engine (pdfplumber extraction, regex cleaning, fuzzy keyword matching) that handles 60% of the workload before any LLM call.
- Achieved 95% keyword-match accuracy across complex multi-column resumes by building and unit-testing a custom NLP parser with synonym mapping and string-similarity scoring.
- Kept the AI pipeline reliable under load by adding request throttling and an automated fallback between two LLM providers, verified through targeted test cases on rate-limit scenarios.

Wellness Wings: Care Management System | *Flutter, Node.js, PostgreSQL — Team of 2*

[GitHub](#)

- Shipped an eldercare platform backend with 100% successful Render deployments by building and testing Node.js and PostgreSQL REST APIs for elderly, volunteer, and guardian user flows.
- Cut volunteer manual-verification time by 80% by implementing PostgreSQL approval workflows with admin-controlled state machines.
- Improved guardian location-tracking accuracy by 95% by integrating OpenStreetMap tile rendering and live GPS endpoints into the Flutter app, collaborating in a 2-person team using Git and Agile check-ins.

EDUCATION

Rajalakshmi Engineering College (Autonomous)

Chennai, India

B.Tech in Computer Science and Business Systems (CS & BS)

Nov 2022 – Apr 2026

- Expected Graduation: 2026 | CGPA: 7.02/10

CERTIFICATIONS & AWARDS

- Oracle Academy: Java Foundations Course (Dec 2025)
- Gen AI Academy: Vertex AI, Streamlit, and Multimodal RAG (Jul 2025)
- Winner: 1st Place in iQuest'25 Department-Level Project Competition (Feb 2025)
